

The German 'LPT Laboratory of Pharmacology and Toxicology GmbH & Co. KG' is being reported in the media it may have manipulated study results and therefore infringed the principles of "Good Laboratory Practice" (GLP). Allegations regarding possible breaches of GLP are reviewed by the respective authority of the German State the laboratory operates in. Some of the studies conducted by LPT are dealing with the (former) glyphosate assessment.

The AGG wants to stress it closely follows the developments on this issue. When indeed fraud is proven or there are serious doubts on the reliability of the procedures of this GLP-lab, the studies performed by this lab will be rejected.

Until now it is only a suspicion. As soon as more is known, the AGG will communicate its definite point of view.
