Annex	II	Acute toxicity - Percutaneous
Point addressed	5.8.1	

1.2	Title	Acute Dermal Toxicity in the Rat (Limit Test)
1.3	Report and/or project N° Novartis File N° (Desire)	963101 62826 / 07
1.4	Lab. Report N°	963101
1.5	Cross reference to original study / report	5.8.1/04
1.6	Authors	Report: [redacted] Summary:
1.7	Date of report	October 1, 1996
1.8	Published / owner	Unpublished / Novartis Crop Protection AG
2.1	Testing facility	Ciba-Geigy Limited, Short-/LongtermToxicology, 4332 Stein, Switzerland
2.2	Dates of experimental work	September 3 to September 17, 1996
3	Objectives	Determination of the acute dermal toxicity in the rat
4.1	Test substance	CGA 62826 technical (metabolite of CGA 48988 and CGA 329351)
4.2	Specification	Batch RV-1592/4, purity 100%
4.3	Storage stability	Stable; reanalysis date: August 1999
4.4	Stability in vehicle	Stable under the conditions of the test
4.5	Homogeneity in vehicle	Not applicable
4.6	Validity	Not applicable
5	Vehicle / solvent	Distilled water
6	Physical form	Solid
7.1	Test method	OECD 402; EEC 92/69, B.3
7.2	Justification	Not applicable
7.3	Copy of method	Not applicable; standard guideline study, procedural details are given in the report
8	Choice of method	Not applicable
9	Deviations	No deviations from EC Directive 92/69 B.3 were noted
10.1	Certified laboratory	Yes
10.2	Certifying authority	Eidgenössisches Departement des Inneren (Federal Department of Home Affairs), Bern, Switzerland
10.3	GLP	Yes
10.4	Justification	Not applicable
11.1	GEP	Not applicable
11.2	Type of facility (official or officially recognized)	Not applicable
11.3	Justification	Not applicable

12 Test system

Animal species:	Rat, TIF: RAI f (SPF)
Source:	Ciba-Geigy Limited, Laboratory Animal Breeding, Pharma Division, 4332 Stein, Switzerland
Dose level:	2000 mg/kg
Group size:	5 animals of each sex
Age/weight:	Approximately 8 weeks / 179-242 g
Administration:	Single dermal application (4 ml/kg) under semiocclusive conditions for 24 hours
Study duration:	14 days
General study design:	Standard according to OECD and EEC guidelines
Mortality:	Checked twice daily, morning and afternoon
Clinical signs:	Checked and recorded within the first hour after dosing, then daily for the duration of the observation period
Local tolerance:	Application site examined daily for signs of skin irritation for the duration of the observation period
Body weight:	Measured and recorded immediately before dose administration, then on Days 7 and 14
Necropsy:	All animals sacrificed at test termination were subjected to a necropsy examination.

13 Findings

Mortality:	There were no mortalities in the study.
Clinical signs:	There were no remarkable clinical signs.
Local tolerance:	There were no remarkable observations at the application site for any animal.
Body weight:	Body weights were not affected by treatment.
Necropsy:	Necropsy examinations revealed no observable abnormalities.
LD_{50}:	Males: > 2000 mg/kg Females: > 2000 mg/kg Both sexes: > 2000 mg/kg

Acute Dermal Toxicity in the Rat (Limit Test)

Test No. 963101

CGA 62826 tech. (Metabolite of CGA 48988)

Report

Study director: Dr. [redacted]

Testing facility: Short-/Long-term Toxicology
CIBA-GEIGY Limited
4332 Stein / Switzerland

Test Guideline: OECD 402; 92/69/EEC, B.3.

Study completed: October 1, 1996

Sponsor: CIBA-GEIGY Limited
Crop Protection Division
4002 Basel / Switzerland

This report contains: 20 pages

Certification of GLP and Verification of the Report

(Certification of Good Laboratory Practice and verification of a complete and unaltered copy of the report by the sponsor)

The Statement of Compliance with Good Laboratory Practice found on page 4, and signed by the Study Director is truthful and accurate. This report as provided by the testing facility is complete and unaltered.

For the Sponsor:

Signature: .... Date: October 07, 1996

Statement of Compliance with Good Laboratory Practice

This study has been performed in compliance with Good Laboratory Practice (GLP) in Switzerland (Verfahren und Grundsaetze der Guten Laborpraxis (GLP) in der Schweiz), Procedures and Principles, March 1986, issued by the Swiss Federal Department of the Interior and the Intercantonal Office for the Control of Medicaments. These procedures are in essence consistent with:

- OECD Principles of Good Laboratory Practice (Council Decision 81/30, adopted on May 12, 1981, and the OECD Recommendation 89/87 concerning the 'Compliance with Principles of Good Laboratory Practice', adopted on October 2, 1989).
- United States Environmental Protection Agency, Title 40 Code of Federal Regulations Part 160 (FIFRA); Federal Register, August 17, 1989.
- United States Environmental Protection Agency, Title 40 Code of Federal Regulations Part 792 (TSCA); Federal Register, August 17, 1989.
- Japan Ministry of Agriculture, Forestry and Fisheries, NohSan, Notification No. 3850, Agricultural Production Bureau, August 10, 1984.

01 Summary

Upon single dose, dermal administration of 2000 mg/kg to male and female rats (limit test) and a 14 day post-treatment observation period, the following LD50 was determined for CGA 62826 tech. (Metabolite of CGA 48988):

LD50 in male rats: **greater than 2000 mg/kg body weight**

LD50 in female rats: **greater than 2000 mg/kg body weight**

LD50 in rats of both sexes: **greater than 2000 mg/kg body weight**

Observations

All animals survived to the scheduled sacrifice.

There were no in-life observations related to toxicity of the test article in all rats.

There were no remarkable findings at the skin application site of all animals.

Body weights were not affected by the treatment.

At autopsy, no deviations from normal morphology were found.

02 Introduction

02.01 Purpose

On request of the Crop Protection Division of CIBA-GEIGY Limited, this study was conducted to determine the acute dermal toxicity of CGA 62826 tech. (Metabolite of CGA 48988) in albino rats.

02.02 Basis

The study design followed the OECD Guideline 402, "Acute Dermal Toxicity", adopted February 24, 1987 and the study protocol.

On request of the sponsor, the whole study was subjected to quality assurance.

02.03 Testing Facility

All the work was done in the testing facility: CIBA-GEIGY Limited
Short-/Long-term Toxicology
4332 Stein / Switzerland

Technical assistant: Ms.

Reporting assistant: Mr.

Archives are located at: CIBA-GEIGY Limited
Werk Stein
4332 Stein / Switzerland
Raw data, protocol and report will be stored at this location.

The job descriptions and the summaries of training and professional experience for all personnel participating in this study are archived in the test facility.

02.04 Dates

Date of protocol: August 30, 1996

Date of administration: September 3, 1996 (males and females)

Experimental completion date: September 17, 1996

02.05 Distribution

- Archives

03 Materials and Methods

03.01 Test Article

Test article:	CGA 62826 tech. (Metabolite of CGA 48988)
Purity:	100%
Batch No.:	RV-1592/4
Physical properties:	solid
Storage conditions:	< + 10°C
Date of reanalysis:	August 1999
Test material received:	August 20, 1996

03.02 Animals

03.02.01 Choice of Species

The rat has been selected for this test as being a standard species for the determination of the acute dermal toxicity.

Young adult albino rats of both sexes (Tif: RAI f (SPF), bred and raised on the premises, were used in the experiment.

Source:
CIBA-GEIGY Limited
Laboratory Animal Breeding
Pharma Division
4332 Stein / Switzerland

Initial body weight range: 179 to 242 g

03.02.02 Husbandry and Diet

The rats were kept in an animal room under conventional laboratory conditions on a 12 hour/day light cycle. The air conditioning system (approximately 15 air changes per hour) maintained a temperature of 22 ± 2°C and a relative humidity of 55 ± 10%.

Animals were individually housed in Macrolon cages type 3, with standardized soft wood bedding (Societe Parisienne des Sciures, Pantin, France). They were acclimatized for at least 5 days before exposure.

Rat diet - NAFAG 890, NAFAG, Gossau/SG, Switzerland - and water were provided ad libitum.

03.02.03 Group Size and Identification

The dose group consisted of 10 rats (5 males and 5 females). Animals were identified by a color code on the tail (a dash-dot code), painted with a felt-tipped waterproof marker. During and after exposure, animals were placed in their cages marked with date of administration, test system and dose group.

03.03 Design and Procedure

Pretreatment:	Approximately 24 hours before treatment an area on the back of the rat of at least 10% of the body surface was shaved with an electric clipper.
Application:	The test article was evenly dispersed on the skin. It was covered with a gauze-lined semiocclusive dressing fastened around the trunk with an adhesive elastic bandage. After 24 hours the dressing was removed and the skin was cleaned with lukewarm water. Thereafter the skin reaction was appraised repeatedly.
Frequency of application:	One single dose.
Dose level:	2000 mg/kg body weight
Total number of animals:	10 (5 males / 5 females)
Vehicle:	distilled water
Volume applied:	4 ml/kg body weight
Observation period:	14 days

03.04 Observations and Records

Mortality:	twice daily; a.m. and p.m.
Signs and symptoms:	daily for 14 days
Body weight:	immediately before application and on days 7 and 14
Necropsies:	The animals were submitted to a gross necropsy at the end of the observation period.

03.05 Rationale for Dose Selection

The dose level was selected according to OECD 402 (limit test; single application of at least 2000 mg/kg body weight).

04 Deviation from Protocol

Initial body weights in 4 of 5 females at study start were less than 10% below the specified range. This deviation was considered to have no effects on the integrity of the study.

05 Results

05.01 In-life Observations

There were no in-life observations related to toxicity of the test article after single dose, dermal application (Tables 2 and 3).

There were no remarkable findings at the skin application site of all animals (Tables 2 and 3).

05.02 Body Weight and Body Weight Change

Individual body weights and body weight change, group means and standard deviations are listed in Tables 4 and 5.

Body weights were not affected by the treatment.

05.03 Mortality

All animals survived to the scheduled sacrifice (Table 1, 2 and 3).

05.04 Necropsies

At necropsy, no deviations from normal morphology were found (Table 6).

Table 1: Mortality

Males	No. of Deaths	% of Deaths
Group 1 (2000 mg/kg)	0 / 5	0

Females	No. of Deaths	% of Deaths
Group 1 (2000 mg/kg)	0 / 5	0
