

Penoxsulam

5.1.2.e

5.1.2.e@ec.europa.eu

Penoxsulam is a PFAS that includes a C-CF₃ group and thus is likely a TFA-precursor. This issue has not been addressed in the risk assessment, leaving the possible risks to groundwater or consumers unknown, which makes it hard to envisage a renewal based on the representative use in rice.

Please note we do not yet have a final position.

Buiten reikwijdte verzoek

Diflufenican

5.1.2.e

[@ec.europa.eu](mailto:ec.europa.eu)

Since data was generated on diflufenican in the DK TriFluPest study on TFA-formation, we could envisage a mandate to EFSA to analyse this data and include it as an addendum to the EFSA conclusion. This way it can be taken into account in the decision making on whether to renew the approval or not.

Please note we do not yet have a final position.
